The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'shc' invariably represent the letter III, in Russian and Bulgarian, respectively, since the pairs of letters (IIIh in Russian and IIIT in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953, price 5p.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

CUMULATIVE INDEXES

Cumulative indexes are available for Physics Abstracts, Electrical & Electronics Abstracts and Computer & Control Abstracts, for both authors and subjects. These cumulations generally cover a period of four years, with the exception of Computer & Control Abstracts where the initial volume covered the period 1966-68. The table below shows the prices and periods for the two types of cumulative index.

Table with 7 columns: Index Type, Subject, Author, Subject, Author, Subject, Author. Rows show price ranges for Physics Abstracts, Electrical & Electronics Abstracts, and Computer & Control Abstracts for various years (1955-59 to 1981-84).

OTHER INSPEC SERVICES

SDI
(Selective Dissemination of Information.)
This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database. Information is dispatched weekly on 150 mm x 100 mm (6" x 4") cards.

TOPICS
This is an SDI service based on standard profiles. There are over 90 subjects covering

high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES
Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their

own internal information and current awareness services.
JAPAN UPDATE
Six high-technology subjects are covered by Japan Update Services. Abstracts are provided for articles selected from over 250 Japanese journals and despatched weekly on conveniently-sized cards. This inexpensive service is designed to help engineers stay abreast of technological developments reported in the Japanese literature.

Japan Update

A new weekly information service from INSPEC alerts you to articles in six high-technology areas from over 240 Japanese Journals.

Japan Update is derived each week from the latest input to the INSPEC Database, the world's foremost information service in electronics, computing and physics.
